Building a Greener Future, One Step at a Time

#BeGreenBePro

PrismGreen is a responsible concrete which is a testament of our unwavering dedication to shrinking carbon footprint and safeguarding the environment and our future generations.

This innovative solution allows us to create a sustainable alternative to conventional concrete without compromising on quality and performance. PrismGreen provides the foundation for buildings that reflect a harmonious blend of modern aesthetics and environmental consciousness.

- Holistically designed green concrete
- It renders longer service life
- Extremely durable
- For all weathers
- Add to green points

PrismLite offers excellent thermal and sound insulation, and improves acoustics while also lowering cooling expenses for your home.

This lightweight concrete, designed for various applications, ranges from 800 to 1,800 kg per cubic meter. Notably, it is significantly lighter than normal concrete, weighing less than half, making it an ideal choice for construction projects.

- Reduced dead load
- Reduced steel
- Thermal and sound proof
- Reduced cost
- Long life and increased durability

PrismPervia is a solution for ground water recharge that captures rainwater where it falls, allowing it to percolate into the ground and recharge our aquifers.

Its permeable surface facilitates the natural infiltration of water, optimizing the process and enhancing sustainability.

- Eco-Friendly
- Low maintenance
- Saves water
- High porosity and strength

Boost productivity with seamless flow

PrismSelf is engineered to exhibit superior flowability, allowing for smooth and uniform filling of intricate formworks, with minimal manual intervention.

The improved flow characteristics eliminate the risk of incomplete compaction, ensuring every nook and corner of the structure is properly compacted. By reducing the need for extensive compaction efforts, PrismSelf not only cuts down on costs but also promotes an environment-friendly approach by minimizing noise pollution during the construction process.

- Designed as per structural needs
- Reduces compaction effort
- Reduces fuel consumption
- Reduces noise
- Ideal for congested reinforcement and tricky structures

PrismFlow is a free-flowing, self-compacting concrete that is quick and easy to place and provides an extremely high-quality surface finish.

This concrete moves easily through intricate or congested reinforcement and offers faster placement, reducing labor and equipment costs.

- Ideal for Alu-Form shuttering
- Great surface finish
- Faster execution
- Less manpower required

PrismFill concrete is a self-compacting cementitious slurry consisting of a mixture of fine aggregate or filler, water, and cementitious material.

It is used as a fill or backfill in lieu of compacted-soil backfill.

- Uniform backfill
- Easy application
- Consistent density
- Quick installation

PERFORMANCE PRISMATIC RANGE

Maximized performance for robust structures

PrismSlabs is engineered to address shrinkage and micro-crack control, it enhances durability, reduces repair/maintenance costs, ensuring long-term structural integrity of slabs.

- Reduced maintenance costs
- Highly durable
- Reduced shrinkage cracks
- Longer service life

A specialized formulation engineered to prevent corrosion of steel reinforcement in concrete structures.

- Corrosion prevention
- Steel protection
- Safety enhancement
- Durability assurance

PrismColumns is a specialized concrete mix engineered for vertical structural columns

- Ensures structural integrity
- Offers ease of casting
- Superior resistance to vertical loads

An innovative concrete mix with proprietary additives enabling self-hydration and curing without external intervention.

- Self-hydrating mix
- Crack resistant
- Accelerates strength

PrismChamp: An advanced concrete mix designed for superior strength, durability, and sustainability.

- Sustainable choice
- Long-lasting performance
- Superior strength
- Enhanced durability

FLOORS
PRISMATIC RANGE

Transform spaces with durable, beautiful, and innovative flooring

PrismDecor, from the Flooring Prismatic Range by Prism RMC, a colourful concrete available in various shapes and patterns

- Longer life
- Extremely aesthetic
- No maintenance

PrismElite is a lightweight flooring concrete solution; it is 2.5 times lighter than standard concrete, making it a versatile and cost-effective solution.

- Resilient flooring
- Crack resistance
- Structural integrity

Introducing PrismTop: A groundbreaking solution for road rehabilitation and strengthening, addressing urbanization and traffic congestion in India's cities.

- Low maintenance
- Enhanced safety
- Durability focused

PrismFibro is a resilient flooring solution engineered to resist surface cracking.

- Longer life
- High impact resistance
- Improved safety

PrismRustic concrete offers a natural, rustic aesthetic for diverse interior and exterior applications.

- Rustic aesthetic
- Low maintenance
- Versatile usage

PrismShield: The ultimate solution for maintaining hygiene and durability in commercial and industrial spaces.

- Germ-resistant formulation
- Stain- and odor-repellent
- Low maintenance
- Ideally suited for public spaces

PrismGlossy elevates interior spaces with its polished, reflective finish, perfect for modern and upscale settings.

- Polished finish
- Elegant appearance
- Easy maintenance

The ultimate solution for flawless floors. Say goodbye to surface irregularities and traction issues with PrismSmooth

- Tailored aesthetics
- Superb finish
- Seamless customization

THE INCREDIBLY DURABLE CONCRETE

Complete Concrete Solutions
PrismMegax
DURABLE DENSE CONCRETE

PrismMegax enhances the lifespan of concrete structures by delivering exceptional strength and increased density.

- Extended service life
- Suitable for gigantic mega structures
- Low permeability
- High load-bearing capacity
- Durability
- Long lasting structure

Complete Concrete Solutions
PrismCoolx
DURABLE CHILLED CONCRETE

PrismCoolx effectively manages temperature differentials within concrete, minimizing thermal tensile cracks and early setting issues.

- Controls temperature
- Minimizes cracks
- Enhances durability

Complete Concrete Solutions
PrismWaterx
WATER REPELLENT CONCRETE

PrismWaterx's use of cutting-edge water repellent chemicals significantly reduces water absorption, improving the structure's durability and making it water repellent.

- Highly water repellent
- Increases service life of the structure
- Ideal for podium slabs

Complete Concrete Solutions
PrismCoastx
WEATHER-RESILIENT CONCRETE

PrismCoastx is engineered to thrive in harsh coastal conditions, boasting exceptional impermeability and durability.

- Chloride proof
- Longevity ensured
- Impermeable strength

Complete Concrete Solutions
PrismBaseX
DURABLE FOUNDATION CONCRETE

PrismBaseX fortifies the foundation of the structures with its low porosity and permeability, enhancing longevity and resilience.

- Customized for various site requirements
- Extremely durable
- High service life
- Low carbon concrete

Complete Concrete Solutions
PrismXpress
HIGH EARLY STRENGTH CONCRETE

PrismXpress offers a solution with accelerated hardening, enabling swift progress and adherence to tight construction schedules.

- Time-saving
- Grade flexibility
- Construction cycle efficiency
- Cost-effective

On the go, ready-to-use portable concrete solutions

PrismMini from the Do It Yourself (DIY) Prismatic range from the house of Prism RMC offers the benefits of RMC in a portable bag. It is engineered to tackle the challenges of hard-to-reach locations and is available in easy-to-handle small consignments.

PrismMini retains its consistency and cohesiveness for an extended period, giving you ample time to work with the mix without compromising on quality

- Consistent quality
- Crash time
- Costs are cut
- Increased durability
- Optimize manpower
- Not disturbing existing process

PrismFix is a versatile solution designed to rejuvenate deteriorated concrete surfaces, enhancing both aesthetics and structural stability. This ready-to-use wet concrete solution offers seamless structural strengthening and retrofitting.

- Rapid strength
- Less manpower
- Better finish
- More convenient
- Durable repairs
- Consistent quality
